

Week- 3 - 01:

--Coding-C-Language Features-Optional.

ROLL NO.:241001251

Name: sivaram.p

Q1) Write a program to read two integer values and print true if both the numbers end with the same digit, otherwise print false.

Example: If 698 and 768 are given, program should print true as they both end with 8.

Sample Input 1

25 53

Sample Output 1

false

Sample Input 2

27 77

Sample Output 2

true

CODE:

Status	Finished
Started	Monday, 23 December 2024, 5:33 PM
Completed	Monday, 28 October 2024, 9:55 AM
Duration	56 days 7 hours

```

1  #include <stdio.h>
2
3  int main(){
4      int num1 , num2;
5      scanf("%d %d",&num1,&num2);
6      int lastDigit1 = num1%10;
7      int lastdigit2 = num2%10;
8      if(lastDigit1 == lastdigit2){
9          printf("true\n");
10     }
11     else{
12         printf("false\n");
13     }
14     return 0;
15 }

```

OUTPUT:

	Input	Expected	Got	
✓	25 53	false	false	✓
✓	27 77	true	true	✓

Passed all tests! ✓

Q2) In this challenge, we're getting started with conditional statements.

Task

Given an integer, n , perform the following conditional actions:

- If n is odd, print Weird
- If n is even and in the inclusive range of 2 to 5, print Not Weird
- If n is even and in the inclusive range of 6 to 20, print Weird
- If n is even and greater than 20, print Not Weird

Complete the stub code provided in your editor to print whether or not n is weird.

Input Format

A single line containing a positive integer, n .

Constraints

- $1 < n < 100$

Output Format

Print Weird if the number is weird; otherwise, print Not Weird.

Sample Input 0

3

Sample Output 0

Weird

CODE:

```
1  #include <stdio.h>
2
3  int main(){
4      int n;
5      scanf("%d",&n);
6      if(n%2!=0){
7          printf("Weird\n");
8      }
9      }else{
10         if(n>=2&&n<=5){
11             printf("Not Weird\n");
12         }else if (n>=6&&n<=20){
13             printf("Weird\n");
14         }else if (n>20){
15             printf("Not Weird\n");
16         }
17     }
18     return 0;
19 }
```

OUTPUT:

	Input	Expected	Got	
✓	3	Weird	Weird	✓
✓	24	Not Weird	Not Weird	✓

Passed all tests! ✓

Q3) Three numbers form a Pythagorean triple if the sum of squares of two numbers is equal to the square of the third.

For example, 3, 5 and 4 form a Pythagorean triple, since $3^2 + 4^2 = 25 = 5^2$

You are given three integers, a, b, and c. They need not be given in increasing order. If they form a Pythagorean triple, then print "yes", otherwise, print "no". Please note that the output message is in small letters.

Sample Input 1

3

5

4

Sample Output 1

Yes

CODE:

```

1  #include <stdio.h>
2
3  int main(){
4      int a,b,c;
5      scanf("%d %d %d",&a,&b,&c);
6      if((a*a+b*b==c*c)|| (a*a+c*c==b*b)|| (b*b+c*c==a*a)){
7          printf("yes\n");
8      }else{
9          printf("no\n");
10     }
11     return 0;
12 }
13
14 }

```

OUTPUT:

	Input	Expected	Got	
✓	3 5 4	yes	yes	✓
✓	5 8 2	no	no	✓

Passed all tests! ✓
